

# Genetic Toxicology Testing Mutation Research

*INTERNATIONAL JOURNAL ON MUTAGENESIS,  
CHROMOSOME BREAKAGE AND RELATED SUBJECTS*

## BOARD OF MANAGING EDITORS

F.H. Sobels, *Leiden (Chairman)*; B.W. Glickman, *Research Triangle Park, NC*;  
P.C. Hanawalt, *Stanford, CA (DNA Repair Reports)*;  
P.H.M. Lohman, *Rijswijk (DNA Repair Reports)*;  
R.J. Preston, *Oak Ridge, TN (Mutation Research Letters)*; K. Sankaranarayanan, *Leiden*;  
F.J. de Serres, *Research Triangle Park, NC*; E. Vogel, *Leiden*;  
J.S. Wassom, *Oak Ridge, TN*

## ASSISTANT EDITOR

M. Shelby, *Research Triangle Park, NC*

## EDITORIAL BOARD

Abbondandolo, *Pisa*  
Abrahamson, *Madison, WI*  
D. Adler, *Neuherberg*

*Special regulations for readers in the U.S.A.* This journal has been registered with the Copyright Clearance Center, Inc. Consent is given for copying of articles for personal or internal use, or for the personal use of specific clients. This consent is given on the condition that the copier pays through the Center the per-copy fee stated in the code on the first page of each article for copying beyond that permitted by Sections 107 or 108 of the U.S. Copyright Law. The appropriate fee should be forwarded with a copy of the first page of the article to the Copyright Clearance Center, Inc., 21 Congress Street, SALEM, MA 01970 (U.S.A.). If no code appears in an article, the author has not given broad consent to copy and permission to copy must be obtained directly from the author. All articles published prior to 1980 may be copied for a per-copy fee of U.S. \$2.25, also payable through the Center. This consent does not extend to other kinds of copying, such as for general distribution, resale, advertising and promotion purpose, or for creating new collective works. Special written permission must be obtained from the publisher for such copying.

*Special regulations for authors.* Upon acceptance of an article by the journal, the author(s) will be asked to transfer copyright of the article to the publisher. This transfer will ensure the widest possible dissemination of information.

## Contents

### Volume 135 (1984)

|                                                                                                                                                                                  |         |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------|
| biological availability of mutagenic compounds adsorbed onto diesel exhaust particulate (MTR 03785)                                                                              |         |
| by M.A. Belisario, V. Buonocore, E. De Marinis and F. De Lorenzo (Napoli) . . . . .                                                                                              | 1- 9    |
| cal mutagens from subjects consuming a mixed-western diet (MTR 08519)                                                                                                            |         |
| by Bandaru S. Reddy, Chand Sharma, Laurel Mathews and Althea Engle (Valhalla) . . . . .                                                                                          | 11- 19  |
| me chloro derivatives of polynuclear aromatic hydrocarbons are potent mutagens in <i>Salmonella typhimurium</i> (MTR 00835)                                                      |         |
| by Anders Colmsjö, Agneta Rannug and Ulf Rannug (Stockholm) . . . . .                                                                                                            | 21- 29  |
| ne hair-dye reagent 2-(2',4'-diaminophenoxy)ethanol is mutagenic to <i>Salmonella typhimurium</i> (MTR 00838)                                                                    |         |
| by S. Venitt, C. Crofton-Sleigh and M.R. Osborne (Chalfont St. Giles) . . . . .                                                                                                  | 31- 47  |
| battery approach versus a single test for evaluating the genotoxic activity of 2-(2',4'-diaminophenoxy)ethanol                                                                   |         |
| A comment on the preceding paper by Venitt, Crofton-Sleigh and Osborne (MTR 00838A)                                                                                              |         |
| by R. Barale, W.G.H. Blijleven, D.J. Brusick, F. Darroudi, G. Kalopissis, D.B. McGregor, N. Loprieno, G. Mohn, A.T. Natarajan, M. Richold, M.M. Shahin and F.H. Sobels . . . . . | 49      |
| Letter to the Editor                                                                                                                                                             |         |
| Reply to the statement of Engelhardt et al. (MTR 00843)                                                                                                                          |         |
| by John Ashby, James M. Parry, C.F. Arlett and M.M. Coombs (Alderley Edge, Swansea, Brighton and London) . .                                                                     | 51- 52  |
| Disruptive effects of ethyl alcohol on mitotic chromosome segregation in diploid and haploid strains of <i>Aspergillus nidulans</i> (MTR 08517)                                  |         |
| by Etta Käfer (Montreal) . . . . .                                                                                                                                               | 53- 75  |
| mutagenicity of flavones, chromones and acetophenones in <i>Salmonella typhimurium</i>                                                                                           |         |
| New structure-activity relationships (MTR 00840)                                                                                                                                 |         |
| by Carl A. Elliger, Philip R. Henika and James T. MacGregor (Berkeley) . . . . .                                                                                                 | 77- 86  |
| Inhibitory effect of saturated fatty acids on the mutagenicity of <i>N</i> -nitrosodimethylamine (MTR 00841)                                                                     |         |
| by Tomoe Negishi and Hikoya Hayatsu (Okayama) . . . . .                                                                                                                          | 87- 96  |
| mutagenic activity of methyl-substituted tri- and tetra-cyclic aromatic sulfur heterocycles (MTR 00845)                                                                          |         |
| by Teri McFall, Gary M. Booth, Milton L. Lee, Yoshinori Tominaga, Ram Pratap, Marvin Tedjamulia and Raymond N. Castle (Provo and Tampa) . . . . .                                | 97-103  |
| mutagenicity of amine drugs and their products of nitrosation (MTR 00848)                                                                                                        |         |
| by A.W. Andrews, W. Lijinsky and S.W. Snyder (Frederick) . . . . .                                                                                                               | 105-108 |
| the influence of pH on the convertogenic activity of plant phenolics (MTR 00847)                                                                                                 |         |
| by Miriam P. Rosin (Vancouver) . . . . .                                                                                                                                         | 109-113 |
| ocus specificity of mutagenicity of 2,4-diaminotoluene in both L5178Y mouse lymphoma and AT3-2 Chinese hamster ovary cells (MTR 00842)                                           |         |
| by W.J. Coppinger, S.A. Brennan, J.H. Carver and E.D. Thompson (Cincinnati and Columbus) . . . . .                                                                               | 115-123 |
| antimutagenic effect of an antioxidant in mammals (MTR 00837)                                                                                                                    |         |
| by H.W. Renner (Karlsruhe) . . . . .                                                                                                                                             | 125-129 |
| study of the potential genotoxicity of methapyrilene and related antihistamines using the hepatocyte/DNA repair assay (MTR 00839)                                                |         |
| by John D. Budroe, Joseph G. Shaddock and Daniel A. Casciano (Jefferson and Little Rock) . . . . .                                                                               | 131-137 |
| mutagenicity of pyridine- and quinoline-carbohydroxamic acid derivatives (MTR 03818)                                                                                             |         |
| by Ewa Lipczynska-Kochany, Hiizu Iwamura, Kazuhiko Takahashi, Atsushi Hakura and Yutaka Kawazoe (Okazaki and Nagoya) . . . . .                                                   | 139-148 |
| gh mutagenic activity formed in pan-broiled pork (MTR 00844)                                                                                                                     |         |
| by Eva Övervik, Lena Nilsson, Lillemor Fredholm, Östen Levin, Carl-Erik Nord and Jan-Åke Gustafsson (Huddinge and Stockholm) . . . . .                                           | 149-157 |
| the mutagenicity of mono- and di-functional aromatic glycidyl compounds (MTR 00850)                                                                                              |         |
| by J.P. Seiler (Waedenswil) . . . . .                                                                                                                                            | 159-167 |
| mutagenicity of urine of various species fed <i>N</i> -[4-(5-nitro-2-furyl)-2-thiazolyl]formamide or 2-amino-4-(5-nitro-2-furyl)thiazole (MTR 00858)                             |         |
| by Shigeaki Hayashida and Ching Yung Wang (Madison) . . . . .                                                                                                                    | 169-173 |

|                                                                                                                                                                                                                                                               |        |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------|
| Mutagenicity of adriamycin in <i>Drosophila melanogaster</i> (MTR 00868)<br>by Julie Clements, Malcolm Phillips and Norman Todd (Exeter and Taunton) . . . . .                                                                                                | 175-17 |
| Further investigations on the cytological effects of some contraceptives (MTR 00849)<br>by A. Kabarity and S. Mazrooei (Kuwait) . . . . .                                                                                                                     | 181-18 |
| Genotoxic effects of ethyl acrylate and methyl acrylate in the mouse evaluated by the micronucleus test (MTR 00851)<br>by Barbara Przybojewska, Elżbieta Dziubałtowska and Zbigniew Kowalski (Łódź) . . . . .                                                 | 189-19 |
| Dithiocarbamate pesticides: Activity of Propineb in the micronucleus test in mice (MTR 00852)<br>by A. Rolandi, E. De Marinis and M. De Caterina (Naples) . . . . .                                                                                           | 193-19 |
| Inhibition of the genotoxicity of bleomycin by superoxide dismutase (MTR 03842)<br>by Michael L. Cunningham, Peter S. Ringrose and Belur R. Lokesh (Vienna) . . . . .                                                                                         | 199-20 |
| Cytogenetic effects of benzene: dosimetric studies on rats exposed to benzene vapour (MTR 00867)<br>by J.A. Styles and C.R. Richardson (Macclesfield) . . . . .                                                                                               | 203-20 |
| Further studies on tetracycline-induced mutation in V79 Chinese hamster cells (MTR 03817)<br>by Sukhendu B. Bhattacharjee, Bijanbihari Pal and Gayaram Bhaumik (Calcutta and Nadia) . . . . .                                                                 | 211-21 |
| The mammalian spot test and its use for testing of mutagenic and carcinogenic potential: experience with the pesticide chlordimeform, its principal metabolites and the drug lisuride hydrogen maleate (MTR 00846)<br>by R. Lang (Berlin/Bergkamen) . . . . . | 219-22 |
| Modifications in the myeloclastogenic effect of benzene in mice with toluene, phenobarbital, 3-methylcholanthrene, Aroclor 1254 and SKF-525A (MTR 03824)<br>by Mohy Morris Gad-El-Karim, Barbara L. Harper and Marvin S. Legator (Galveston) . . . . .        | 225-24 |
| <i>Contents, Vol. 135 (1984)</i> . . . . .                                                                                                                                                                                                                    | 245-24 |
